[GM] Unmapped Entity Alerts

Description

To ensure data integrity and proactive issue handling within the Global Mapping System, we will introduce a new alert family: **Unmapped Entities**. These alerts will help identify and flag feed entities that are not yet mapped to internal entities.

Unmapped entities may arise due to several reasons:

- **Disabled creation triggers** (e.g., no preferred feed configured for a sport or competition),
- **Multiple conflicting entities** from non-preferred or secondary feeds,
- **Low-confidence fuzzy logic matches,** or **no matches found** during auto-mapping,
- **Feed inconsistencies** or **naming variations** causing mapping logic failures.

To address this, the system will generate alerts categorized by entity type. Each alert will include:

- Defined **trigger conditions** (e.g., entity created but not mapped within X minutes),
- **Mapping confidence levels** (if applicable),
- Alert **priority/severity** (e.g., critical, warning, info)

EPIC: TDM-4276: [GM] Unmapped Entity Alerts PRODUCT BACKLOG

📊 **Success metrics**

Goal	Metric
Timely identification and resolution of unmapped entities	• % of unmapped entity alerts resolved within defined SLA (e.g., 24 hours for high-severity, 3 days for low-severity) - Average time from alert creation to mapping resolution
Reduction of unmapped and duplicate entities in the system	• % decrease in unmapped entities over time - % decrease in duplicate events, competitions, or participants
Improved trader efficiency and satisfaction	• % of alerts automatically resolved by mapping actions (vs manual resolution)

	- Trader satisfaction score regarding alert usefulness and system responsiveness
Data integrity and trading completeness	• % of trading offers impacted by unmapped entities (should decrease) - % of alerts acknowledged and acted upon by traders

Alert Categories and Descriptions

Alert Type	Description
Unmapped Competitions	Raised when a competition from a feed is created but not mapped to any internal competition.
Unmapped Events	Triggered when an event is received from a feed but lacks a valid mapping to an internal event.
Unmapped Markets/Selections	Generated when markets or selections under a mapped event do not have valid mappings (especially critical for BetBuilder or MTS).
Unmapped Participants (Teams, Players)	Participants such as teams or players that appear in events or markets but are not linked to internal participants.

Unmapped Entity Alert Templates

---

1. Unmapped Competition

- **Message**:
  `BG-4567: English Premier League <StartDate> from <feed> in Sport: Football is not mapped.`
- **Abbreviation**:
  `UCMP`
- **Description**:
  A competition has been received from the feed but is not yet mapped to any Internal (PTC) Competition.
- **Severity Levels**:

- `Severity 0`: More than 100 days until competition start date
- `Severity 10`: 0 to 10 days before start date

- **Color**:
  To be defined (TBD)
- **CTA / Action**:
  Clicking the competition link opens the **Feed Entity screen**, allowing the trader to map the feed competition to an Internal Competition.

---

2. Unmapped Event

- **Message**:
  `BG-99812: Manchester United vs Chelsea on <StartDate> from <feed> in Sport: Football is not mapped. Reason: Team <feed_team> not Mapped`
- **Abbreviation**:
  `UEVT`
- **Description**:
  An event has been received from the feed but is not mapped to any Internal (PTC) Event.
- **Severity Levels**:
  - `Severity 0`: More than 30 days before event start
  - `Severity 10`: 0 to 1 day before event start
- **Color**:
  TBD
- **CTA / Action**:
  Clicking the event link redirects to the **Feed Entity screen** for the event, where mapping to an Internal Event can be performed.
- **Reasons**:
  - Team(s) <feed_team list> not mapped
  - Participant(s) <feed_Participant list> not Mapped. (for Player vs Player Games)
  - Event start time out of threshold
  - No Matching Event Found
  - [From non-preferred creation feed] <feed_name> is not preferred to create events directly.

---

3. Unmapped Market

- **Message**:
  `Market ID BG-M-784311 under Event: Manchester United vs Chelsea from`

`<feed> is not mapped.`

- **Abbreviation**:
  `UMKT`
- **Description**:
  A market has been received from the feed but has no mapping to an Internal Market template or type.
- **Severity Levels**:
  - `Severity 5`: Market belongs to an unmapped event
  - `Severity 10`: Market belongs to a mapped event and is within 24 hours of live
- **Color**:
  TBD
- **CTA / Action**:
  Link redirects to the market-level Feed Entity screen, allowing trader to initiate mapping.

---

4. Unmapped Team

- **Message**:
  `Team ID BG-T-45231: Manchester United from <feed> is not mapped.`
- **Abbreviation**:
  `UTM`
- **Description**:
  A team used in an incoming event or competition has not been mapped to an Internal Team entity.
- **Severity Levels**:
  - `Severity 3`: Used in an unmapped competition/event
  - `Severity 8`: Used in an active, mapped event
- **Color**:
  TBD
- **CTA / Action**:
  Link navigates to team mapping screen where Feed Team can be linked or created as an Internal Team.

---

5. Unmapped Player

- **Message**:
  `Player ID BG-P-92217: Marcus Rashford from <feed> is not mapped.`

- **Abbreviation**:
  `UPLR`
- **Description**:
  A player entity received via feed (often from props or stat markets) has no mapping to an Internal Player profile.
- **Severity Levels**:
  - `Severity 2`: Player exists in feed but not used in active offers
  - `Severity 9`: Player is used in a market or event that is live or scheduled
- **Color**:
  TBD
- **CTA / Action**:
  Link opens the Player Mapping screen, where traders can either map to an existing Internal Player or create one.

Requirements

Requirement	User Story	Priority	Scenarios	Jira
Alerts for Unmapped entity (lead time -offset or start time)			Alert template, Actions on Alert, Redirections,	
Alerts Management Screen	As a trader I want to view all the alert types So that I can view and activate or deactivate an Alert types as per my need	M	• Alert Types Screen • Activate/ Deactivate Option • Columns: Name, abb.	

			Code, Color.	
Edit Alert Type	As a trader I want to Edit the Alert So that I can Activate or deactivate or edit the severity increment policy	M	• Edit Pop up • Show details • Edit fields: Abb. Severity increment (-event start offset)	
Alerts History Screen	As a Trader I want to Search and View Alerts in a screen So that i can find and act on the alerts based on my preference --- As a trader I want the alerts to statuses based on the actions taken or the underlying entity So that alert can have a defined lifecycle **Statuses**: New, acked, Hidden, Resolved. Expired (only for Events which have ended)	M	• Search Criteria: ◦ Period ◦ Alert Types ◦ Severity ◦ Change Type ▪ Severity Up ▪ Severity Down ▪ Hidden ▪ Acked	

			▪ Resolved ◦ Feed ◦ Sport • Actions: ◦ Acknowledge ◦ Hide ◦ Resolve	
Unmapped Competitions	As a trader, I want to receive alerts when a feed competition is not mapped to any internal competition, So that I can investigate and manually map it if needed.	S		
Unmapped Events	As a trader, I want to be alerted when a feed event is not mapped to any internal event, So that I can review and resolve any missing or low-confidence mappings.	S	These alerts can have additional status called **Expired.**	
Unmapped Markets / Selections	As a trader, I want the system to notify me when markets or selections from a feed event are not mapped to any internal market or selection, So that I can ensure completeness of our trading offer.	S		
Unmapped Teams	As a trader, I want to be alerted when a team entity from a feed is not mapped to any internal team,	S		

	So that I can validate and maintain accurate mappings for team-based events.			
Unmapped Players	As a trader, I want to receive alerts when player entities from feed data are not mapped to internal player entities, So that player-based markets (e.g., goal scorers, carded players) remain accurate and tradable.	S		
Automatic Resolution of Alerts	As a trader I want the alerts to be automatically resolved/Unresolved (Opened) if the triggering event i.e. Unmapped entity is mapped So that I do not leave spam or un-actionable alerts and do not need to resolve alerts again after doing a mapping	M	• Auto resolve when we create an internal entity or map to internal entity • Auto Unresolve when we Remove Mapping	
Alerts/Notifications Icon on top Right	As a trader I want to see the New or Open (exclude Acked, Hidden, Expired) Alerts count on the top right of the screen So that I have a visual cue/data to go and address the Unamapped entity alerts	C		

🎨 User interaction and design

Similar to existing Alerts History module in PTC.
