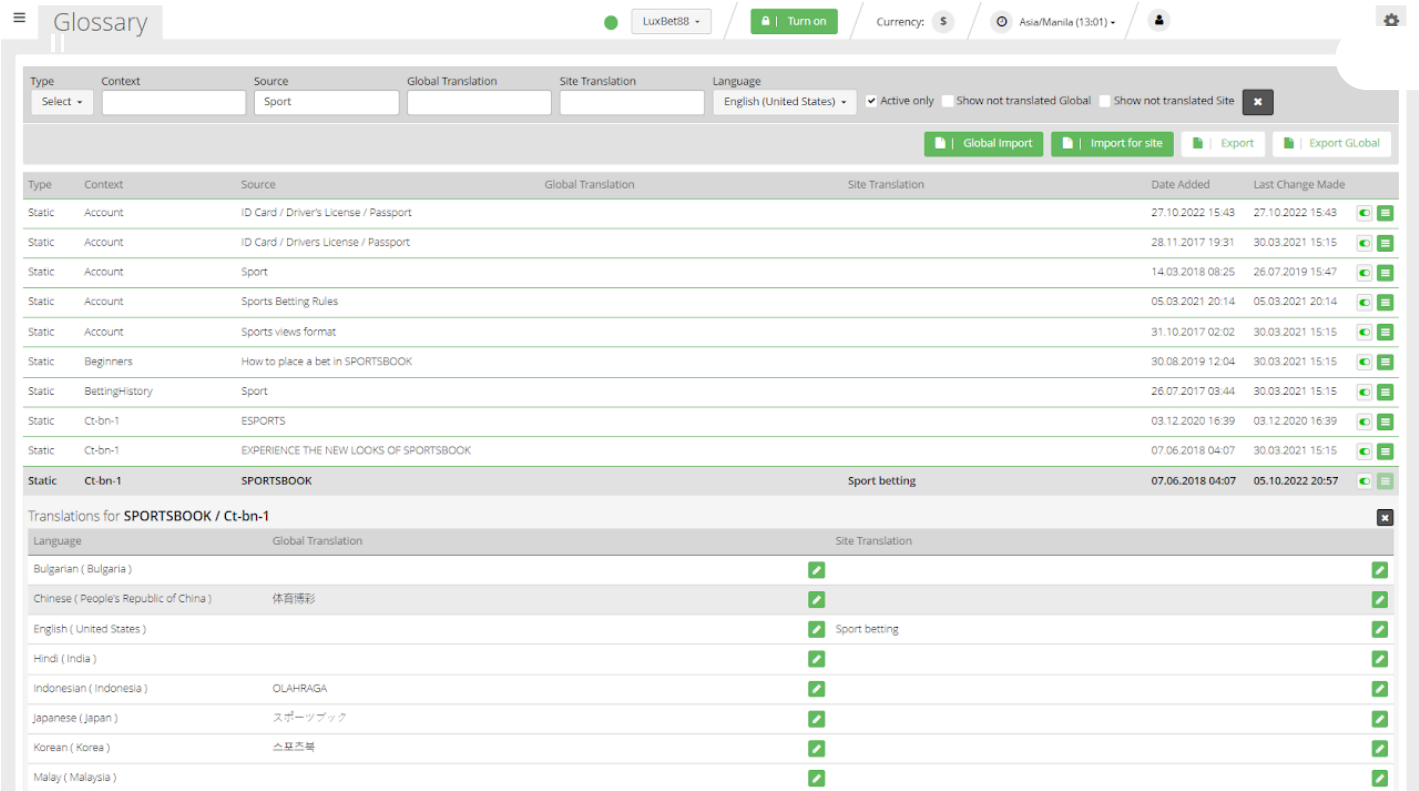
Glossary



Glossary

In the Glossary tab, admins have the opportunity to translate or rename some text inputs that are shown on the front end.

Glossary tab on top has:

- **Type** - filter with a dropdown with a list of context types that the admin wants to be filtered for search. Multiple context types can be selected at once from dropdown.
  - Static - will filter contexts with type static. Type static is probably most common in Glossary.
  - Currency - will filter contexts with type currency. All currencies that can be set for the site can be found, translated, or edited if admins use Type > Currency.
  - Country - will filter contexts with type country. All countries that can be set for the site can be found, translated, or edited if admins use Type > Country.
  - Sport - will filter contexts with type sport. All sports can be found, translated, or edited if admins use Type > Sport.
  - Category - will filter contexts with type category. All categories can be found, translated, or edited if admins use Type > Category.
  - League - will filter contexts with type league. All leagues can be found, translated, or edited if admins use Type > League.
  - Team - will filter contexts with type team. All teams can be found, translated, or edited if

admins use Type > Team.

- Player - will filter contexts with type player. All players can be found, translated, or edited if admins use Type > Players.
- Market - will filter contexts with type market. All markets can be found, translated, or edited if admins use Type > Market.
- Line - will filter contexts with type line. All lines can be found, translated, or edited if admins use Type > Line.
- Market Group - will filter contexts with type market group. All market groups can be found, translated, or edited if admins use Type > Market Group.
- Payment Method - will filter contexts with type payment method. All payment methods can be found, translated, or edited if admins use Type > Payment Method.
- Error Message - will filter contexts with type error message. All error messages can be found, translated, or edited if admins use Type > Error Message.
- Event Message - will filter contexts with type event message. All event messages can be found, translated, or edited if admins use Type > Event Message.
- Slot Game - will filter contexts with type slot game. All slot games can be found, translated, or edited if admins use Type > Slot Game.
- Event State - will filter contexts with type event state. All event states can be found, translated, or edited if admins use Type > Event State.
- Incident - will filter contexts with type incident. All event incidents can be found, translated, or edited if admins use Type > Incident.
- Incident Statistic - will filter contexts with type incident statistic. All event incident statistics can be found, translated, or edited if admins use Type > Incident Statistic.
- Incident Static - will filter contexts with type incident static. All event incident statistics can be found, translated, or edited if admins use Type > Incident Static.
- Weather - will filter contexts with type static. All event weather states can be found, translated, or edited if admins use Type > Weather.
- Pitch - will filter contexts with type static. All event pitch conditions can be found, translated, or edited if admins use Type > Pitch.
- Bonus Name - will filter contexts with type static. All bonus names can be found, translated, or edited if admins use Type > Bonus Name.
- Surface - will filter contexts with type static. All event surface information can be found,

translated, or edited if admins use Type > Surface.

- Payment Group Name - will filter contexts with type static. All payment group names can be found, translated, or edited if admins use Type > Payment Group Name.
- Payment - will filter contexts with type static. All payment information or messages related to payments can be found, translated, or edited if admins use Type > Payment.

- **Context** - field where admins can input context. Matching results will show below in the data field.

  NOTE: Contexts such as PageTitle and PageDescription are for SEO use. They can be set for any page or content on the site.

- **Source** - field where admins can input sources. Matching results will show below in the data field. Source is usually text that actually shows on the site, for most admins, this will be the most used filter, as it is the easiest way to find exact text that needs to be translated.

  NOTE: Source can contain placeholders that SHOULD NOT BE TRANSLATED AT ANY TIME. For possible placeholders, please check the list below:

  - [HomeTeam]
  - [AwayTeam]
  - [Draw]
  - [PlayerName]
  - [HomePlayerName]
  - [AwayPlayerName]
  - [TeamName]
  - [Points]
  - [Milestone]
  - [Even]
  - [Odd]
  - [Player]
  - [Space]

- **Global Translation** - field where ⓘ nins can input global translation. Matching results will show below in the data field. Filter by global translation will show only results that have a

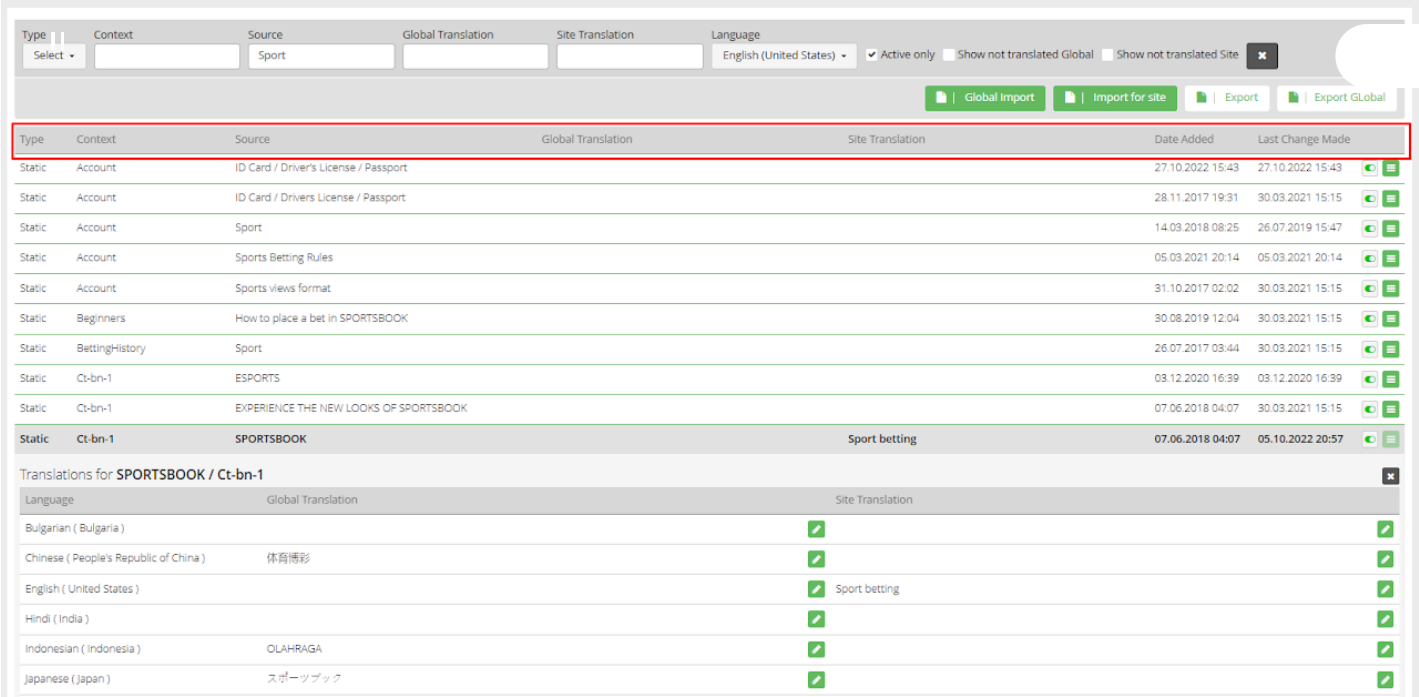
global translation set.

- **Site Translation** - field where admins can input site translation. Matching results will show below in the data field. Filter by site translation will show only results that have a site translation set. Site translation, if set, will override global translation on the site (frontend).
- **Language** - filter with a dropdown with a list of languages that are set for that brand in Site Manager. Only one language can be set at once. It will filter announcements by language.
- **Active Only** - checkbox if selected, will show only active instances.
- **Show not translated Global** - checkbox if selected, will show only instances that do not have set global translation.
- **Show not translated Site** - checkbox if selected, it will show only instances that do not have set site translation.
- **Clear** - button will clear the filter to the default setting.

In the Glossary tab, admins have the opportunity to translate or rename some text inputs that are shown on the frontend by importing data from a file. Files need to be in .csv format, data should be in format as on screenshot with Type, Context, Source, and Translation in header:

- **Global Import** - will import data from Translation column for selected Type, Context and Source as a Global Translation.
- **Import for site** - will import data from Translation column for selected Type, Context and Source as a Site Translation.
- **Export** - will export filtered data in .csv list from the glossary with Site Translations in the translation column.
- **Export Global** - will export filtered data in .csv list from the glossary with Global Translations in the translation column.

	A	B	C	D	E
1	Type	Context	Source	Translation	
2	Static	Ct-bn-1	SPORTSBOOK	Sport betting	
3					
4					



Glossary data shown below the filter shows:

- **Type** - show context types for each instance.
- **Context** - show context for each instance, if available.
- **Source** - show source for each instance.
- **Global Translation** - show global translation for each instance, if available.
- **Site Translation** - show site translation for each instance, if available.
- **Date Added** - show date when that instance was created/added for each instance.
- **Last Change Made** - show date when that instance was last time changed/edited for each instance.
- **Activate/Deactivate** - activates or deactivates instance in glossary.
- **Translations** - button gives opportunity to admin to add/edit global and site translations:
  - Translation field - admin should click the edit button next (global or site) to field the language that admin wants to input in translation. Once translation is added/edited, admin should save it.
  - Save - button will save changes and close add/edit translation field.
  - Cancel - button will cancel all changes and close add/edit translation field

NOTE: New/edited translations could take some time until they reflect on site (frontend), depending on CloudFlare loading. Cle ⓘ ıg a browser cache and refreshing a browser (ctrl + F5) could help to expedite it.
