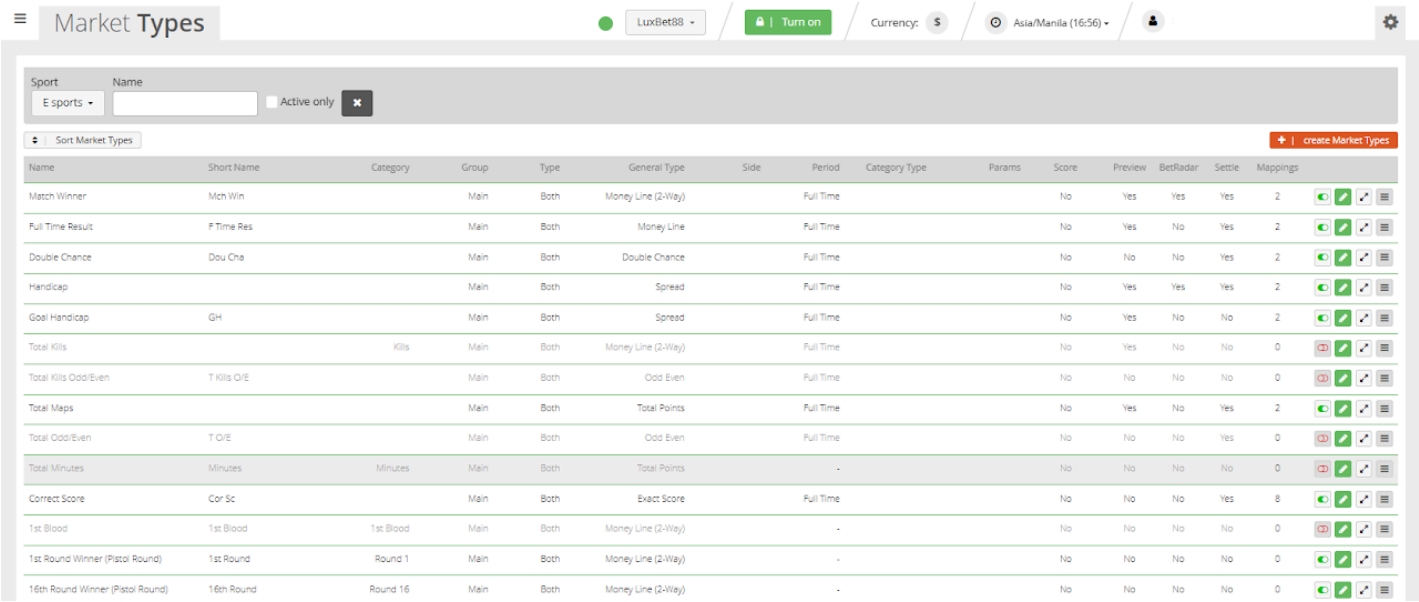
Market Types

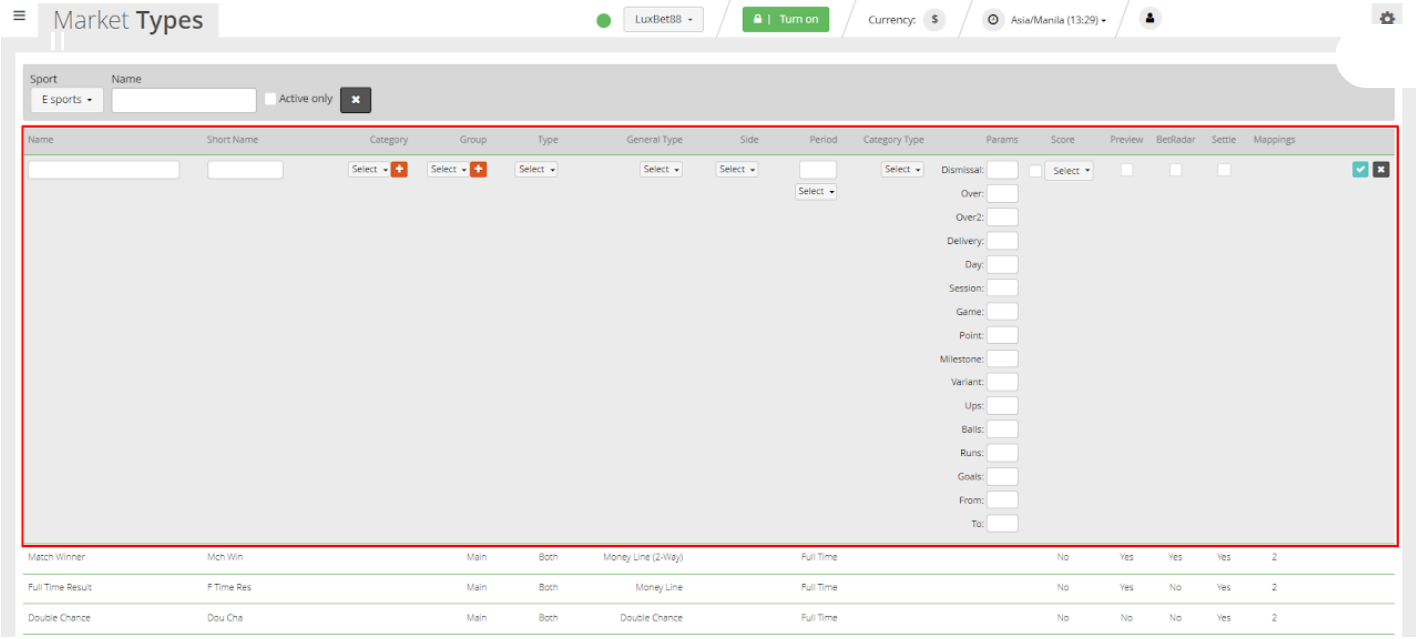


Market Types

In Market types tab, admins have the opportunity to manage market types. Market types pertain to the markets of each individual sport and short description in which period of their game/event it is pertaining. Selection for these markets could also be seen and edited through here, as could customization and mapping as well.

Market Types on top have:

- **Sport** - dropdown where admin needs to select sport for which market types will be shown below.
- **Name** - field is where admin can search market type by name, sport needs to be selected from the dropdown for search to show any result.
- **Active only** - checkbox will load only active market types.
- **Clear "X"** - button will clear sport selection and name input.
- **Sort Market Types** - button will give opportunity for admin to sort market Types. Market Types will be sorted on site as they are sorted under Market Types.



- **+ create Market Type** - button will give opportunity for admin to create new market group. Market Groups will be sorted on site as they are sorted under Market Groups.
  - Name - field is where admin needs to type new market type name.
  - Short Name - field is where admin needs to type a new market-type short name. Market-type short name, if set, will be shown in Event Details instead of full name.
  - Category - dropdown gives the opportunity for admin to set a market category for a new market type. The list is dynamic as new market categories can be created. Admin can also create a new market category from here with:
    - Add Category - button gives opportunity to admin to add/create new market category
  - Group - dropdown gives the opportunity for admin to set a market group for a new market type. List is dynamic as new market groups can be created. Admin can also create a new market group from here with:
    - Add group - button will give opportunity for admin to create new market group.
  - Type - dropdown gives opportunity for admin to set market type - type:
    - Both - market types will be used for both prematch and live markets.
    - PreMatch - market type will be used for prematch markets only.
    - Live - market type will be used for live markets only.
  - General Type - dropdown gives the opportunity for admin to set the general type for the new market type. General Type sets market type selection behavior on site. For example, Money Line (2-Way) shows 2 ⓘ ections (Home Team - Away Team), Money Line or Full Time Result will show 3 selections (Home Team - Draw - Away Team), until Spread and

Total general market types will also show margins next to each selection. The General Type list is dynamic, new general types can be added by developers.

- Side - dropdown gives opportunity for admin to set side for new market type:
  - Undefined - is mostly used for market types that are not limited to one team or player that participates in the event.
  - Home - is used for market types that are created for the Home team only. For example, Home Team Totals, Home Team Spread.
  - Away - is used for market types that are created for the Away team only. For example, Away Team Totals, Away Team Spread.
  - Player - is used for market types that are related to Player. For example, Player Total, Player Spread, To Score, Top Player.
  - Team - is used for market types that are created for a single Team. For example, Team Top Player, To Qualify, To Win.
- Period - gives opportunity for admin to set period for new market type:
  - Field - field is where admin can type a new market type period number. For example, for Half it can be 1 or 2, for Quarter 1, 2, 3, or 4.
  - Dropdown - gives the opportunity for admin to set period type for the new market type:
    - Full Time - is used for a full-time period. It can be used in any sport.
    - Half - is used for a half-time period. It can be used in any sport played on halves or quarters.
    - Quarter - is used for quarter period. It is used in Basketball, Ice Hockey, or any other sport played on quarters.
    - Period - is used for period as global solution. It can be used in any sport.
    - Set - is used for set period. It is used in Tennis, Volleyball, or any other sport played on sets.
    - Game - is used for game period. It can be used in any sport where teams need to win multiple games to win. For example, in Basketball playoffs, a team needs to win 3 games to advance.
    - Inning - is used for the inning period. It is used in Cricket and Baseball or any other sport played on innings.
    - Map - is used for map period. It is used in eSports such as League of Legends, Dota

2, or any other sport played on maps.

- Round - is used for round period. It is used in eSports as Counter Strike 2 and Valorant or any other sport played on rounds.
- Frame - is used for frames.
- End - is used for the end period.
- Overtime - is used for overtime periods. It can be used in any sport that can include overtime.
- HalfTime - is used for a half-time period. It can be used in any sport.
- Shootout - is used for shootout period. It is mostly used in eSports as Counter Strike 2 and Valorant or any other sport that can include shootout.
- Shootout Ten - is used for shootout ten period.
- Match - is used for match period. It can be used in any sport.
- Plate Appearance - is used for plate appearance. It is used in Baseball and refers to a batter's turn at the plate. Each completed turn batting is one plate appearance.
- Leg - is used for leg period. It can be used in any sport and competition where more legs are played, as, for example, cups.

- Category Type - dropdown gives the opportunity for admins to set category type for a new market type. Category Types are more detailed categories that describe incidents that could happen during an event and that can be set for market types.
- Params - fields where admins can set parameters for the market type. Parameters that can be set are:
  - Dismissal - will set the Dismissal parameter to a particular number for that market type.
  - Over - will set the Over parameter to a particular number for that market type.
  - Over2 - will set the Over2 parameter to a particular number for that market type.
  - Delivery - will set the Delivery parameter to a particular number for that market type.
  - Day - will set the Day parameter to a particular number for that market type.
  - Session - will set the Session parameter to a particular number for that market type.
  - Game - will set the Game parameter to a particular number for that market type.

    - Point - will set the Point parameter to a particular number for that market type.
    - Milestone - will set the Milestone parameter to a particular number for that market type.
    - Variant - will set the Variant parameter to a particular number for that market type.
    - Ups - will set the Ups parameter to a particular number for that market type.
    - Balls - will set the Balls parameter to a particular number for that market type.
    - Runs - will set the Runs parameter to a particular number for that market type.
    - Goals - will set the Goals parameter to a particular number for that market type.
    - From - will set the From parameter to a particular number for that market type.
    - To - will set the To parameter to a particular number for that market type.
- Score - gives the opportunity for admin to show a score for that market type:
    - Checkbox - if selected, will enable a score for that market type.
    - Dropdown - from which admin can select what type of score will be shown for that market type.
- Preview - checkbox if selected will set that market type as Preview Market Type. Preview Market Types are shown on site in the preview section aside from Main Markets when Asian View is selected.
- BetRadar - checkbox if selected will allow BetRadar feeder to control markets for that market type.
- Settle - checkbox if selected, will allow a feeder that is mapped to it to settle that market-type outcome if that feeder is sending a settlement for that market.
- Save - button will save new market type.
- Cancel - will not save new market type.

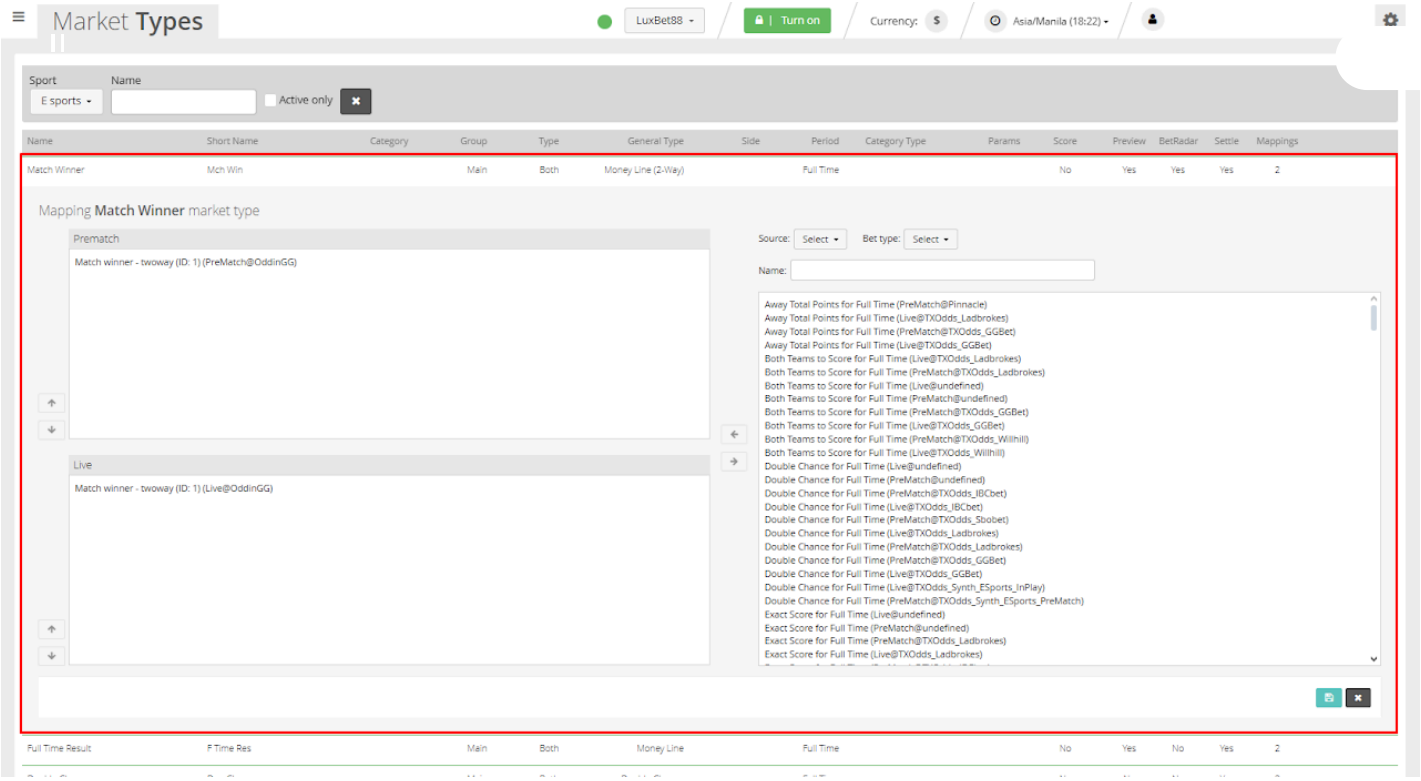
- **Market Types** data shown below the filter shows:
- **Name** - show market type name.
- **Short Name** - show market-type short name. Market-type short name, if set, will be shown in Event Details instead of full name.
- **Category** - show market category set for market type.
- **Group** - show market group set for market type.
- **Type** - show set market type - type:
  - Both - market type is used for both prematch and live markets.
  - PreMatch - market type is used for prematch markets only.
  - Live - market type is used for live markets only.
- **General Type** - show general type set for market type.
- **Side** - show side set for market type:
  - Undefined - market type is not limited to one team or player that participates in the event.
  - Home - market type created for the Home team only.
  - Away - market type created for the Away team only.
  - Player - market type related to Player markets.
  - Team - market types created for a single Team.
- **Period** - show period set for market type:

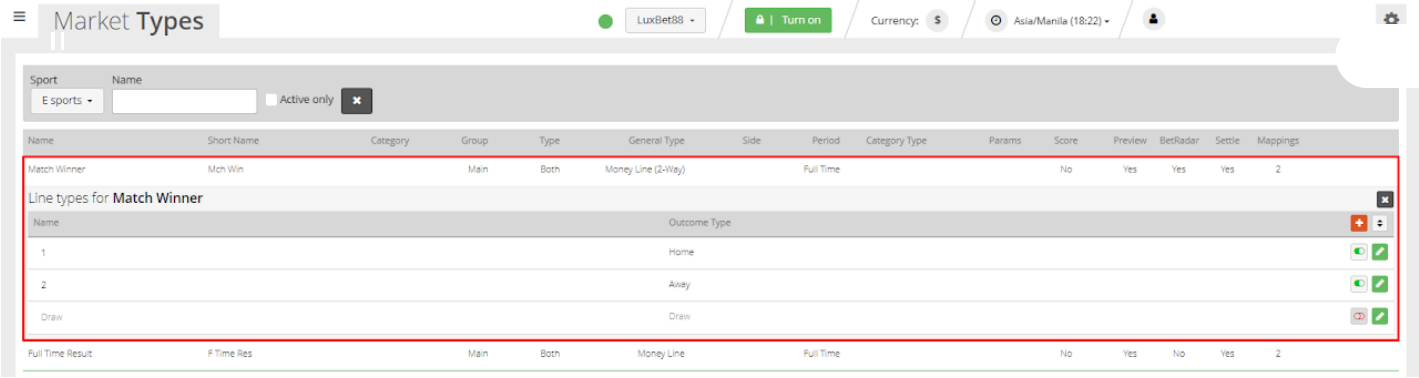
  - Full Time - market type for full time period.
  - Half - market type for half-time period.
  - Quarter - market type for quarter period.
  - Period - market type for period as global solution.
  - Set - market type for set period.
  - Game - market type for game period.
  - Inning - market type for inning period.
  - Map - market type for map period.
  - Round - market type for round period.
  - Frame - market type for frames.
  - End - market type for end period.
  - Overtime - market type for overtime period.
  - HalfTime - market type for half-time period.
  - Shootout - market type for shootout period.
  - Shootout Ten - market type for shootout ten period.
  - Match - market type for match period.
  - Plate Appearance - market type for plate appearance.
  - Leg - market type for leg period.
- **Category Type** - show set category type for market type.
- **Params** - show set parameters for the market type.
  - Dismissal - show the Dismissal parameter set for that market type.
  - Over - show the Over parameter set for that market type.
  - Over2 - show the Over2 parameter set for that market type.
  - Delivery - show the Delivery parameter set for that market type.
  - Day - show the Day parameter set for that market type.

  - Session - show the Session parameter set for that market type.
  - Game - show the Game parameter set for that market type.
  - Point - show the Point parameter set for that market type.
  - Milestone - show the Milestone parameter set for that market type.
  - Variant - show the variable parameter set for that market type.
  - Ups - show the Ups parameter set for that market type.
  - Balls - show the Balls parameter set for that market type.
  - Runs - show the Runs parameter set for that market type.
  - Goals - show the Goals parameter set for that market type.
  - From - show the From parameter set for that market type.
  - To - show To parameter set for that market type.
- **Score** - show the score that is set for that market type.
- **Preview** - show if that market type is set as Preview Market Type. Preview Market Types are shown on site in the preview section aside from Main Markets when Asian View is selected.
- **BetRadar** - show if BetRadar feeder is enabled to control markets for that market type.
- **Settle** - show if settlement is enabled for that market.
- **Mappings** - shows the number of mapped feeders for that market type.
- **Action** - buttons give the opportunity for admins to:
  - Activate/Deactivate - switch admin can use to deactivate or activate Market Type.
  - Edit - button will give opportunity for admin to edit market type setting. Everything that can be edited with the Edit button is the same as for the "**+ create Market Type**" option that is described above.



- Map - button gives opportunity for admin to map feeder source for market type:
  - Prematch - field shows which feeder sources are mapped for prematch markets for that market type. If more than 1 prematch feeder source is mapped, they can be ordered with Up and Down arrows on the left side. Ordering of market-type prematch feeder source is important because odds shown on site will always follow the prematch feeder source that is ordered higher if that prematch feeder source feeds market-type with odds.
  - Live - field shows which feeder sources are mapped for live markets for that market type. If more than 1 live feeder source is mapped, they can be ordered with Up and Down arrows on the left side. Ordering of market-type live feeder sources is important because odds shown on site will always follow the live feeder source that is ordered higher if that live feeder source feeds market-type with odds.
  - Source - dropdown gives the opportunity for admins to filter feeder sources shown in the feeder source list per their source.
  - Bet type - dropdown gives opportunity for admin to filter feeder sources shown in feeder source list per its odds type:
    - Both - filters feeder source that offers both prematch and live odds.
    - PreMatch - filters feeder source that offers prematch odds only.
    - Live - filters feeder source that offers live odds only.
  - Name - filed is where admins can type the feeder source name to filter it directly.

- [Feeders Source List] - field show list of all feeder sources that are available to be mapped for that market type. Feeder Source can be mapped in Market Type with <- (Left arrow) or unmapped from Market Type with -> (Right arrow) placed left of Feeder Source List field.
- Save - button will save market type feeder source mapping changes.
- Cancel - will not save market-type feeder source mapping changes.



- LineType - gives opportunity for admins to set lines and their outcomes for each market type:
  - Create - button gives opportunity for admin to create new line for market type and set its outcome type:
    - Name - field where admin needs to type new market type line name.
    - Outcome Type - dropdown where admin can select one of the outcome types that will define the new market type line. For example, if market type is set as Match Winner where 3 outcomes are available as final result: Home Team win, Draw, and Away Team wins, that Market Type needs to have set 3 lines:
      1. Home Team - Home outcome type should be set.
      2. Draw - Draw outcome type should be set.
      3. Away Team - Away outcome type should be set.
  - Sort - button gives opportunity for admin to sort lines inside market type.
  - Activate/Deactivate - switch admin can use to deactivate or activate the Market Type line.
  - Edit - button will give opportunity for admin to edit market type line setting. Everything that can be edited with the Edit button is the same as for the "**Create**" option that is described above.
  - Cancel - button will not save market type line creating changes.
