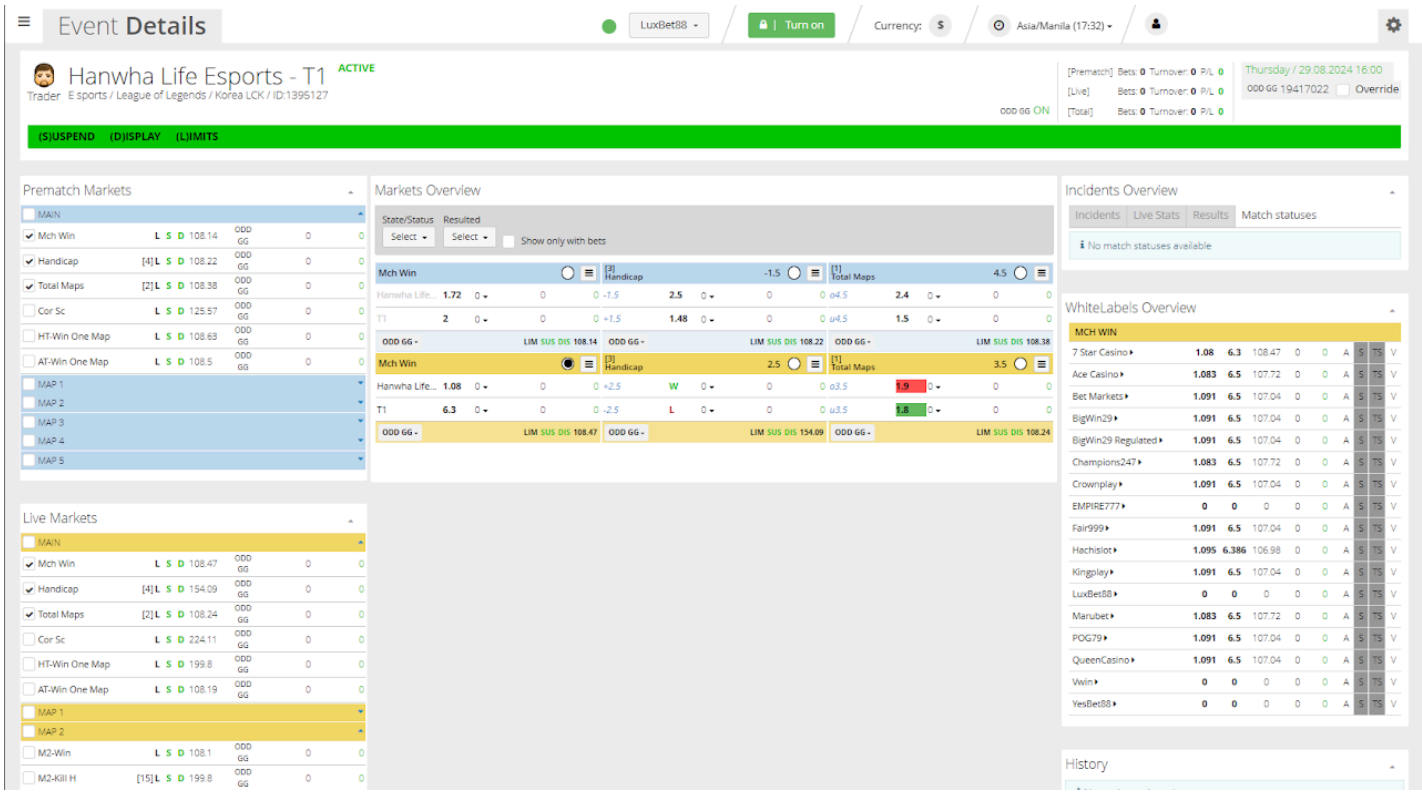
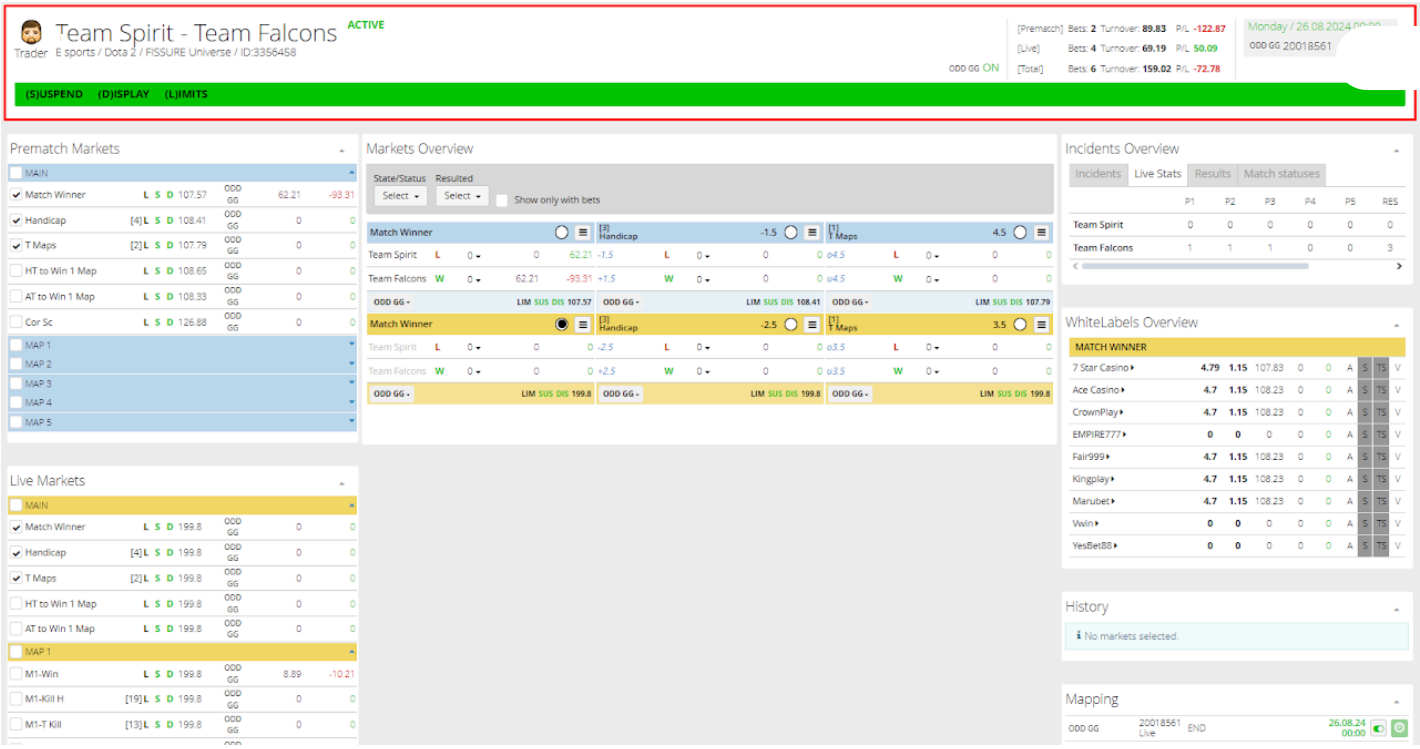
[Event Details]



Event Details is the one responsible for handling, editing, and creating markets inside an event. Here the admin could create prematch or live events that would appear in the middle of the Event Details. As could be seen in the image on the right, an eSports event has been created manually, and available markets that could be created are also listed down. Event Details are produced for each event that was created/mapped from Feeder Events. Each of these created events will have their Event Details, which could be located from Domain Events.



<u>Event Details</u> on top has a header that shows event info and gives admin options to:

Event - shows information about the event, the Home Team and Away Team, and the event state.

Start Time - shows the exact date and time of the event start.

Sport - shows information about the event sport.

Category - shows information about the event category.

League - shows information about the event league.

Id - shows local event ID.

Feed info - shows if event markets are run by feed or manual.

[Prematch] - shows number of Bets, Turnover generated, and P/L percentage for event prematch markets.

[Live] - shows number of Bets, Turnover generated, and P/L percentage for event live markets.

[Total] - shows number of Bets, Turnover generated and P/L percentage for all event markets.

Event Time - shows event:

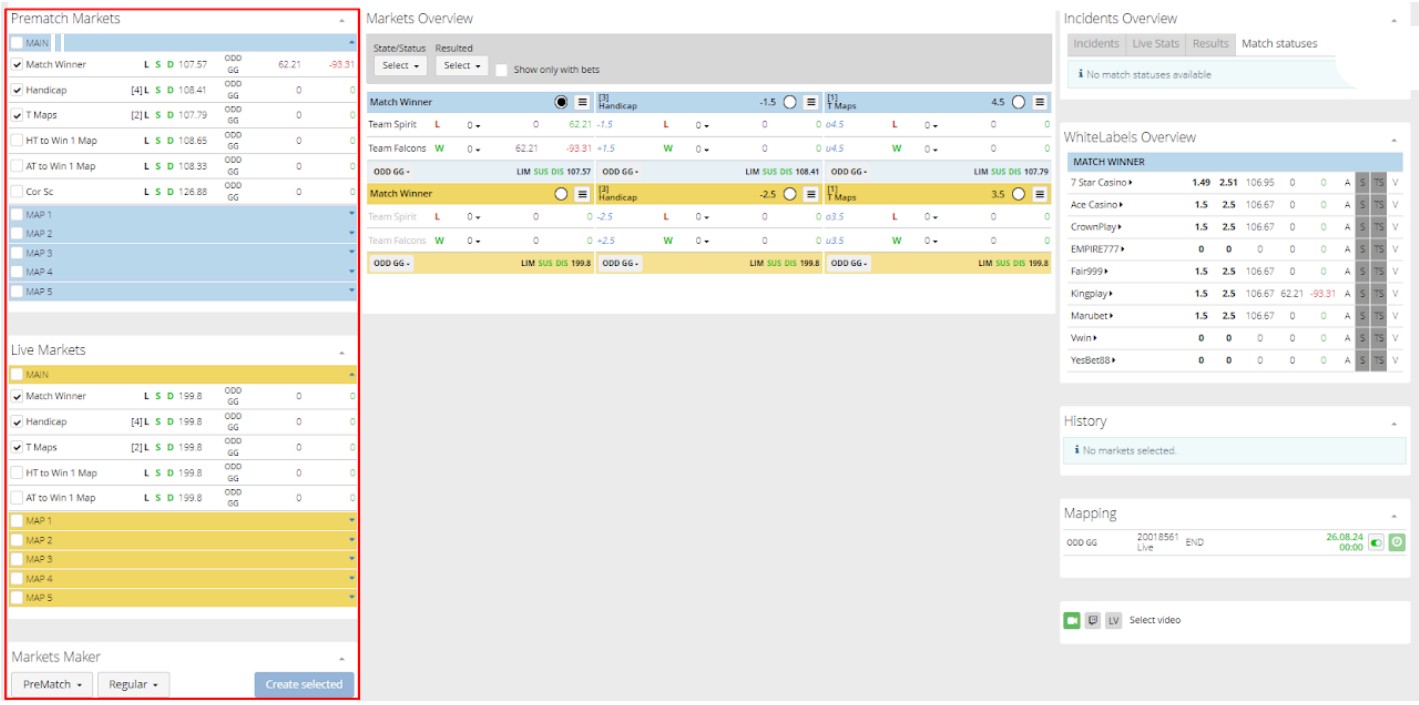
- Event Start time
- Event Feeder and Feeder ID
- Override - checkbox offers an opportunity for admins with proper access rights to manually override the original event start time. When the checkbox is clicked, admin can set another date and time for events to start.

(S)USPEND - gives the opportunity to admin to suspend/unsuspend an event.

(D)ISPLAY - gives opportunity to admin to display (unhide)/un-display (hide) event.

(L)IMITS - gives the admin the opportunity to set custom global and category limits for the event by site/brand and by market type. How Global and Category limits are set is described in the Limits Manager section under Global and Categories.

User Details in the Event Details tab has 3 sections:



Markets section on the left side is split into Prematch Markets, Live Markets, and Markets Maker. Admin can collapse all prematch and live markets with the collapse button on the right side of the prematch and live markets window. Markets below are grouped by Market Groups as Main, Half, Specials, Map, and others. Each market group can be collapsed with a collapse button next to the market group name. Each market has:

Checkbox - gives the opportunity to admin to select a market that will be shown in the Markets Overview section, where it can be more analyzed and set.

Market Name - shows market type short name if it is set in Market Types for that market.

[Number of lines] - shows number of lines that market has. It is usually for Handicap and Total markets that may have more lines due to different margins offered.

L - gives opportunity to admin to set custom limits for the market.

S - gives opportunity to admin to suspend/unsuspend market.

D - gives opportunity to admin to display (unhide)/un-display (hide) market.

Odds Key - shows information about the odds key that is used for the market. It is calculated from prices provided by feeder or manually set by admin/trader.

Feed info - shows information about which feeder runs the market prices at the moment.

Turnover - shows turnover generated from bets on that market.

P/L - shows profit/loss generated from bets on that market.

Markets Maker section on the left side below Prematch Markets and Live Markets has an option for admins to manually create markets that are not already created by feeder or manually for the event:

PreMatch/Live - gives opportunity for admin to select which market type will be created:

- Prematch - will create prematch market for the event. If event start time has already passed, prematch markets will not show.
- Live - will create a live market for the event.

Regular/Player/Players - gives opportunity to the admin to select for what kind of event market will be created:

- Regular - this is the most common choice when admins need to create a new manual market for the event.
- Player - if admin wants to create a new market for PlayerProps event, then admin needs to select Player from the dropdown.
- Players - if admin wants to create a new market for the Player Matchups event, then admin needs to select Players from the dropdown. Admin will have the option to select a player for [Home Team] and a player for [Away Team] or to Add a new player to the list with the orange "+" button. This is still not in use, it needs some development to be fixed.

Create Selected - button will create a market.

Markets Overview section in the middle shows each market that has been provided by the feed or that has been manually created. All markets that have been selected on the left side in the Markets section will appear here, and all markets here could be managed through the component that will show once the market/s has been selected.

Markets Overview on top has a Filter, which can be used by admins to filter markets:

State/Status - admin can select which market state/status will be used for the search:

- Active - will filter markets in an active state. Market is in active state when at least one price is active, market is showing on site when it's in active state.
- Suspended - will filter markets in suspended states. Market is in suspended state when all prices are suspended due to some incidents on field or with pricing feed, market is showing on site when it's in suspended state, but users cannot bet as prices are not showing.
- Hidden - will filter markets in a hidden state. The market is in a hidden state when all prices are hidden due to some incidents on the field or with the pricing feed. The market is not showing on site when it's in a hidden state.
- Inactive - will filter markets in an inactive state. Market is in inactive state when all prices are inactive, market is not showing on site when it's in inactive state.

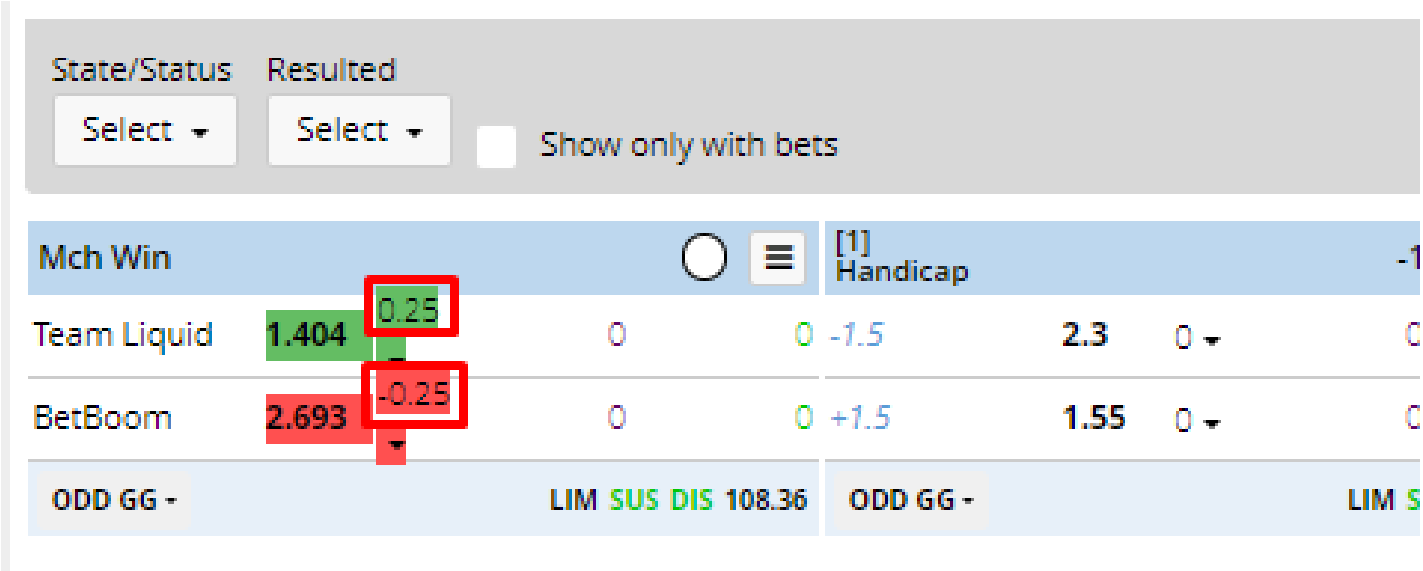
Resulted - admin can select which markets will be used for the search:

- Resulted - will filter markets that are already resulted/settled.
- Unresulted - will filter markets that do not have a result/settlement yet.

Show only with bets - will filter only markets that have bets.

Each market shows:

- **Market Name** - show name of market (Market Type).
- **White Circle (Load to White Label)** - can be selected next to Market Name. It will give opportunity for admin to analyze market Incidents Overview, White Label Overview, and History on the right side.
- **Hamburger Menu (To History)** - will load price changes history for selected market to History selection on the left side.
- **Home Team Name (Selection)** - shows home team name.
- **Away Team Name (Selection)** - shows away team name.
- **Home Team Odds** - shows odds from the feeder or input of the admin for the home team. If the market has already resulted, it will show settlement for that selection instead (W / L).
- **Away Team Odds** - shows odds from the feeder or input of the admin for the away team. If the market has already resulted, it will show settlement for that selection instead (W / L).



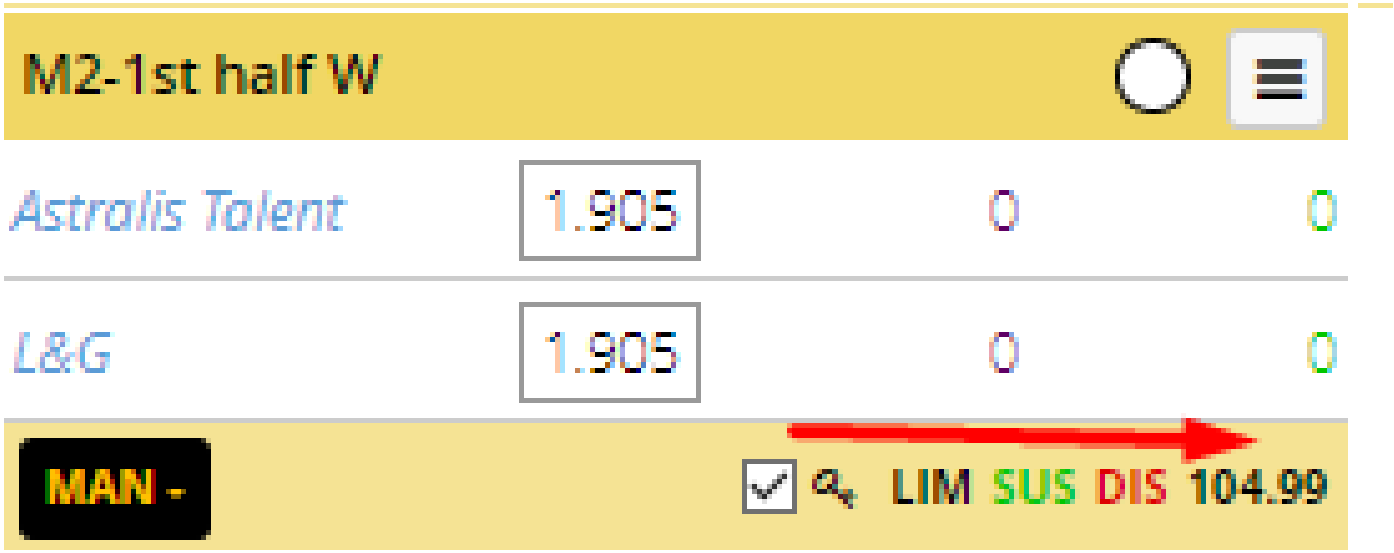
- **Odds Adjustment tool** - odds adjustment tool is available on both home and away team odds. Admins have the opportunity to adjust one or both odds and override what is sent from a feed. Odds Adjustment tool has:
  - " - " - button will deduct value 1 on each click to Input Field.
  - Input field - admin can directly input a value of odd adjustment. Decimal numbers are accepted.
  - " + " - button will add value 1 on each click to the Input Field.
  - Apply to the other side - if the checkbox is selected (it is by default), it will apply adjustments to both sides/prices.
  - Save - button will save applied adjustment setting.
  - Cancel - button will cancel applied adjustment setting.

Odds Adjustment amounts will be shown over original odds.

- **Bet Amount** - shows sum of bet amounts in USD for that market selection/team.
- **P/L** - shows P/L sum of bets in USD for that market selection/team.
- **Feed Source name** - it could be seen below the team names and has an option to change the feed for a certain market. Admin can open a dropdown and select a different feed provider, if available, for that market.
- **LIM** - gives opportunity for admin to set custom limits for the market.
- **SUS** - gives opportunity for admin to suspend/unsuspend the market.
- **DIS** - gives opportunity for admins to display (unhide)/un-display (hide) the market.
- **Odds Key** - shows the odds key that is set for that market (based on actual prices for all selections).

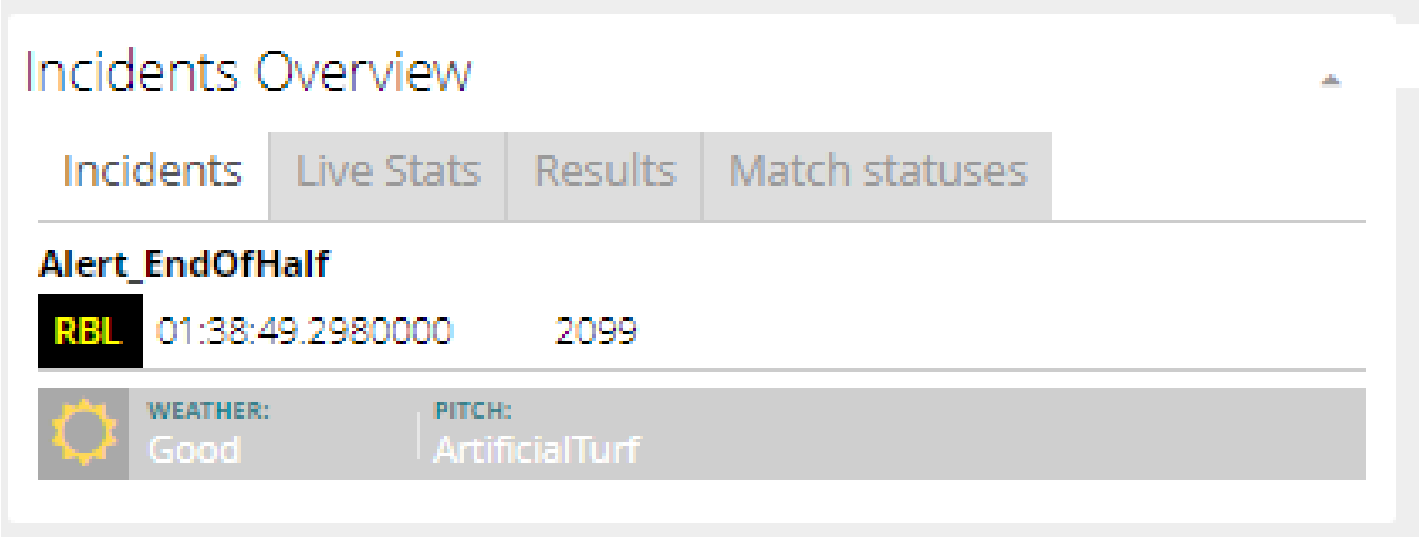
Manual Market - can be created with the Markets Maker tool. Manual market offers opportunity for admin to manually trade a market in event for users:

- **Market Name** - show name of market (Market Type).
- **White Circle (Load to White Label)** - can be selected next to Market Name. It will give opportunity for admin to analyze market Incidents Overview, White Label Overview, and History on the right side.
- **Hamburger Menu (To History/Setting)** - will load price changes history for selected market to History selection on the left side.



- **Home Team Name (Selection)** - shows home team name.
- **Away Team Name (Selection)** - shows away team name.
- **Home Team Odds** - shows odds input of the admin for the home team. Default input is 1.905 that matches odds key 105 (5%) if both odds are set to that value. If the market has already resulted, it will show settlement for that selection instead (W / L).
- **Away Team Odds** - shows odds input of the admin for the away team. Default input is 1.905 that matches odds key 105 (5%) if both odds are set to that value. If the market has already resulted, it will show settlement for that selection instead (W / L).
- **Bet Amount** - shows sum of bet amounts in USD for that market selection/team.
- **P/L** - shows P/L sum of bets in USD for that market selection/team.
- **Feed Source name** - it could be seen below the team names and has an option to change the feed for a certain market. In this case, it will show MAN as the market is manually created.
- **Odds Key Lock** - checkbox that will lock the odds key to its setting. When the odds key is locked and admin changes odds for one side, the other side will automatically change based on the odds key. If the odds key is not locked, then admin can set it by setting odds on both sides until the wanted key is set, and then lock it to set the real odds. Default input for odds is 1.905 that matches odds key 105 (5%) if both the odds are set to that value.
- **LIM** - gives opportunity for admin to set custom limits for the market.
- **SUS** - gives opportunity for admin to suspend/unsuspend markets.
- **DIS** - gives opportunity for admin to display (unhide)/un-display (hide) the market.
- **Odds Key** - shows the odds key that is set for that market (based on actual prices for all selections).

Event Market Details section on the right side has 5 sections Incidents Overview, White Labels Overview, History, Mapping, and Select Video that can be used by admins to see more details about the event or each market and selection available for it. Each of these sections is more explained below.



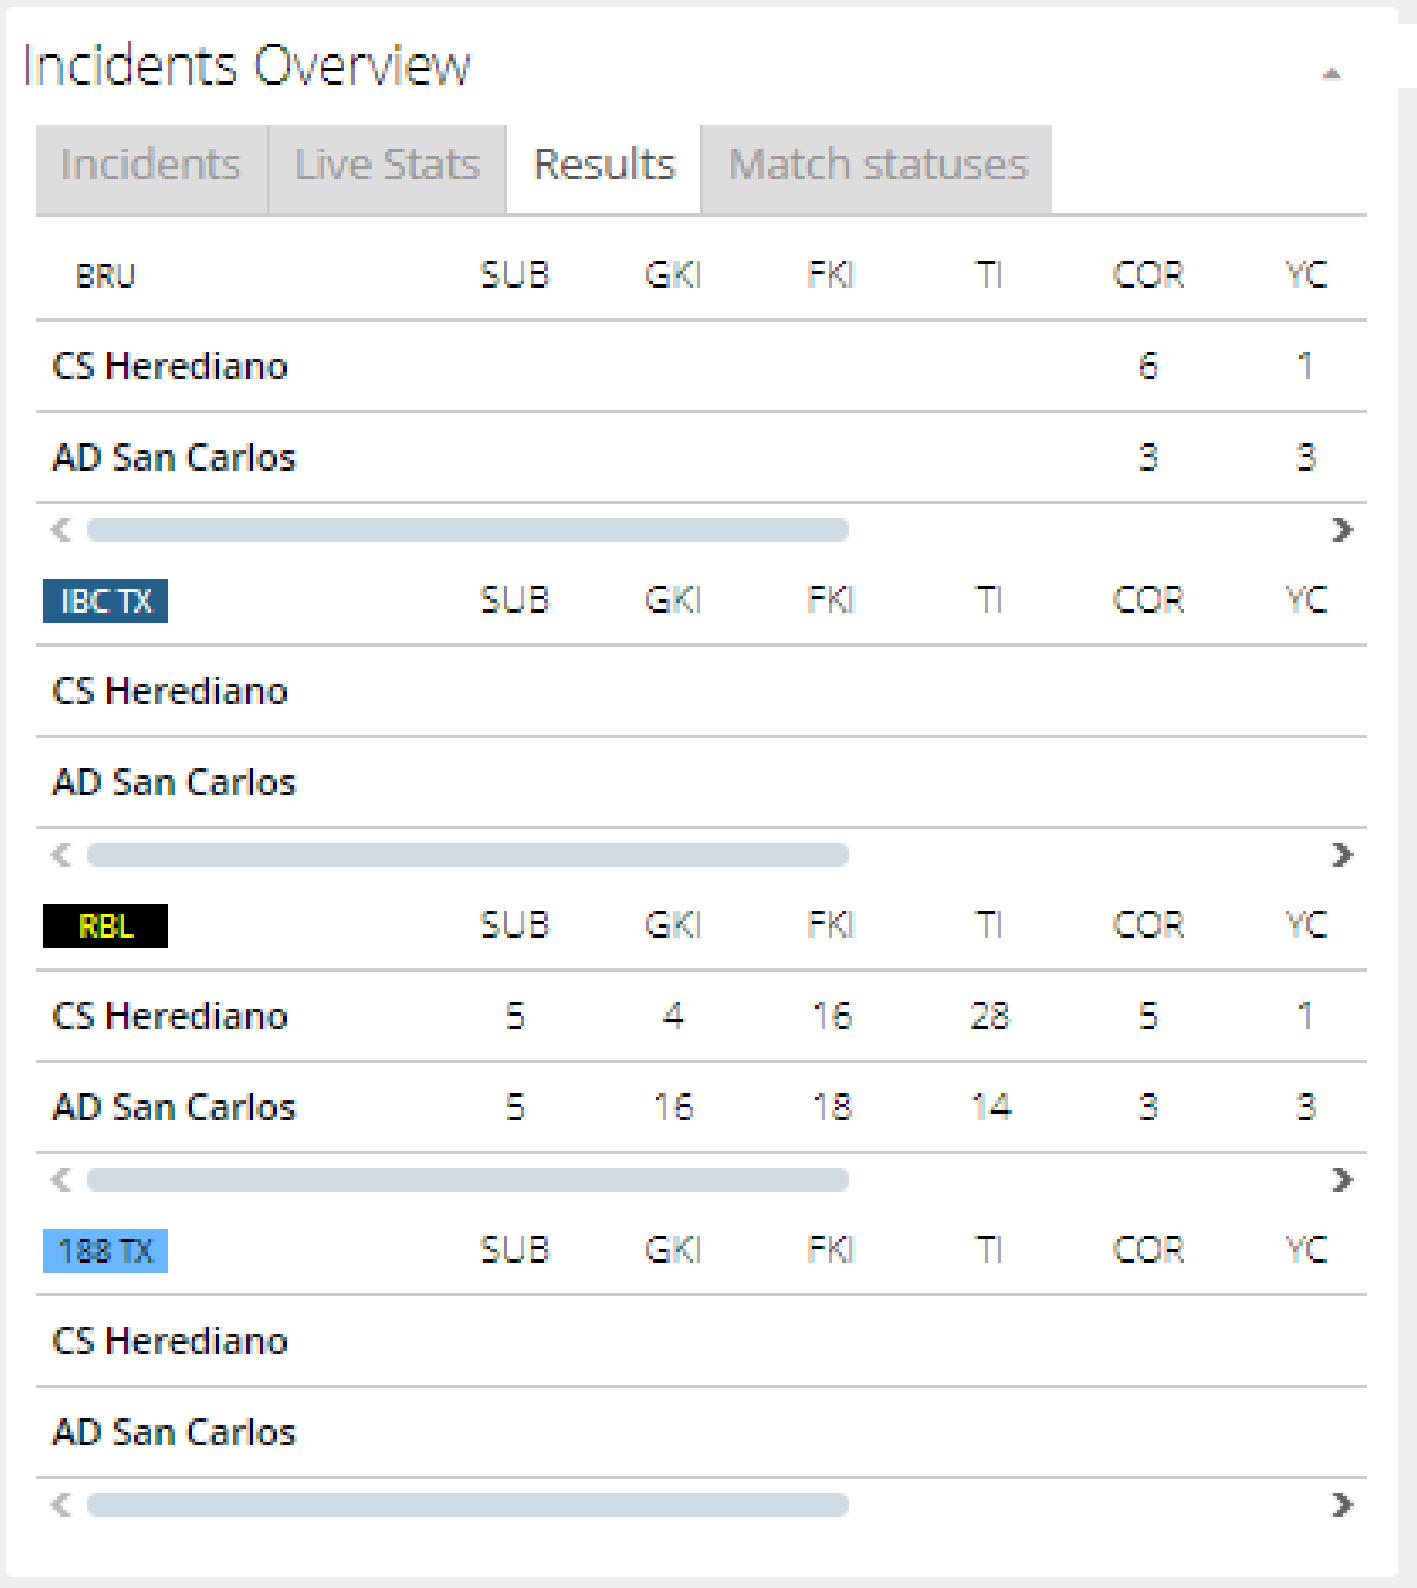
Incidents Overview section has 4 tabs that show different data for the whole event:

- **Incidents** - tab can show more information about feed source, event, weather, pitch conditions, and others, depending on which information feed provider is sending. Incidents, also known as play-by-play, are the ones responsible for giving details on what's happening on the match. Also, it has the purpose of identifying when to suspend or hide a market automatically in order to prevent unwanted bets from come in. Feed providers sent these incidents and they could be mapped from Feeder Events.

- **Live Stats** - tab can show more information about event statistics. Stats can be shown per event period for each team, and it depends on which information feed provider is sending and for which sport. Live stats is like the internal scoreboard for the admin, which is also displayed for the convenience of the users who are placing their bets. This part is also located in Event Market Detail. The most important statistics for the event that give impact or value to the odds could be seen here. The data shown here is dynamic, and it differs from event to event and sport to sport. Because of this, the data will not be explained in detail.

	SUB	GKI	FKI	TI	COR	YC
CS Herediano	5	4	16	28	5	1
AD San Carlos	5	16	18	14	3	3

28	FreeThrow	14
14	Fouls	13
107	Attacks	86
55	DangerousAttack	40
6	ShotsOnTarget	2
8	ShotsOffTarget	2
2	Offsides	2
5	ShotsBlocked	0
0	ShotsWoodwork	1



- **Results** - tab shows actual result for event with all data that is available from each feed provider that is mapped for that event. Abbreviations are displayed with the results of statistics below them. These could be the basis for settlement purposes. Data shown per feed provider can differ depending on what data they send. The data shown here is dynamic, and it differs from event to event and sport to sport. Because of this, the data will not be explained in detail.

- **Match Statuses** - will show match status if it is sent from the feed provider.

WhiteLabel Overview displays and handles the odds being shown on different WHL. It display the information of the market that has been selected based on how it appears on different white labels. It also has the function to SUS - DIS the market for specific labels. Lastly, the admin could also choose a feed source for the market in each and specific WHL. Data shown here per WhiteLabel:

- **Market Type Name** - shows the market type name (or short name) for which WhiteLabel Overview is selected and the below list of all White Labels.
- **Home Team Odds** - shows odds from the feeder or input of the admin for the home team.
- **Away Team Odds** - shows odds from the feeder or input of the admin for the away team.
- **Odds Key** - shows the odds key that is set for that market (based on actual prices for all selections).
- **Bet Amount** - shows sum of bet amounts in USD for that market selection/team.
- **A** - shows P/L sum of bets in USD for that market selection/team.
- **S** - gives opportunity for admins to set custom limits for the market.
- **TS** - gives opportunity for admins to suspend/unsuspend the market.
- **V** - gives opportunity for admins to display (unhide)/un-display (hide) the market.

Next to each White Label name there is an arrow which will expand market for particular white label. Here admin has the opportunity to:

- **Feed Provider dropdown** - admin can switch feed provider for that market for that white label (if other feed providers are available).
- **Lock** -
- **SUS** - gives opportunity for admins to suspend/unsuspend the market for that white label.
- **DIS** - gives opportunity for admins to display (unhide)/un-display (hide) the market for that white label.
- **Odds Key** - shows the odds key that is set for that market (based on actual prices for all selections).

History shows the movements and updates that have been made for certain selection prices. Admin can use:

- **Dropdown** - beside the name of the team/player/selection to change and see history for the other team/player/selection.
- **Refresh** - button to see the latest changes and updates.
- **"X"** - button will close the history window.

Data shown in history:

- **Time** - shows exact time when price was updated.
- **SRC** - shows odds feed provider, source.
- **Type** - shows history of actions done on odds by system or admin/trader.
- **Price** - shows history of how odds change.
- **Adj.** - shows odds adjustments setting, if any.

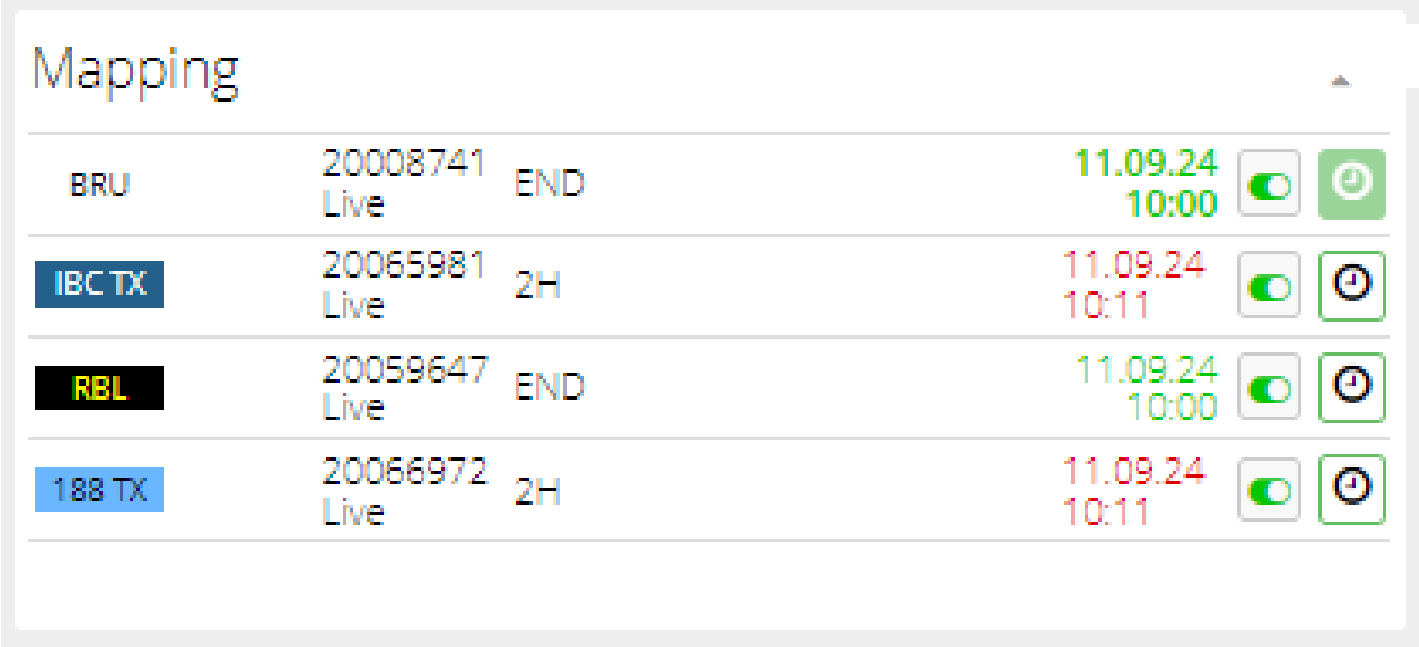
11.09.24 11:45	BRU	Edit	16.25	0



Mapping shows the list of mapped feed providers for the market. Data shown is:

- **Feed Provider name** - shows name of feed provider.
- **Feeder ID** - shows feeder ID for that event.
- **Market** - shows if it is Prematch or Live market.
- **Time** - shows exact start time of the event sent by the feed provider.
- **Switch** - admin can use it to deactivate that feed provider mapping for that market.
- **Clock** - admin can click on it to set it as a priority so the time that was sent from that feed provider can be used for event start time. The clock icon marked as green is set as priority.

Select Video gives the opportunity for admin to map video/stream that will be shown on the fr end to users when the event is live:

- **Green Camera (Video)** - button offers opportunity to admin to map video or stream coverage for the event. Admin can use Ultra Fast Sports, Twitch, and YouTube video and stream providers here.
  - Video Source - field is where admin should input the URL of the video. A preview of the video channel will show below so admins can see if it is the correct URL that will be mapped for the event.
  - Set for league - if the checkbox is selected, the same URL will be used for all events that are mapped under that event league, so admins do not need to map it for each event individually.
  - Twitch - checkbox should be checked if the URL is from a Twitch channel.
  - YouTube - checkbox should be checked if the URL is from a YouTube channel.
  - UltraFastSports - checkbox should be checked if URL is from UltraFastSports provider.
  - Change - button will save changes set for video.
  - Clear video settings - button will clear all settings to default. If admin wants to remove video that is set for the event (or league), after clicking on Clear video settings, admin needs to save it with the Change button to confirm the new setting.
